Dr. J. Hoets,
148 Macquarie Street,
SYDNEY.

Dear Dr. Hoets,

I saw Master here this morning and had a talk to his father and mother and I also saw the X-ray films and I feel that this is a sclerosing type of osteogenic sarcoma. I do not think it is a Ewing's Tumour. It is always difficult in these cases to decide on the method of treatment but I am inclined to favour deep X-ray therapy first with possible amputation later as has been advocated in America. I am not very happy about a biopsy, but if it is decided on, I think that deep X-ray treatment should be given before hand. I told the father that the treatment in my opinion rested between immediate amputation, and deep-X-ray treatment probably followed later by amputation, and that I was inclined to favour the latter. If you do a biopsy I would be very interested to hear the report. I have asked them to bring this letter to you and discuss the question again.

With kind regards,

Yours sincerely,
